# STUDOR® MAXI-FILTRA™

Eliminate bad odours with the  
**STUDOR®**  
**Maxi-Filtra**

## The Product

The **Maxi-Filtra** is an active carbon filter designed to eliminate bad odours produced by the drainage system. For use externally, it operates as a 2-way vent, filtering air in both directions. Particularly for use with septic tanks, the **Maxi-Filtra** may also be installed on open vents - either where the open vents already exist or for new-builds where regulations insist on their inclusion within the building's drainage system. For best results, the **STUDOR® Maxi-Filtra** should be installed in conjunction with Air Admittance Valves from the **STUDOR®** System.

## The Advantages

The **STUDOR® Maxi-Filtra**, as part of the complete **STUDOR®** System:

- **Prevents transmission** of odorous sewer gas into the building or surrounding areas.
- **Can be retrofitted** into an existing drainage system to solve problems.
- **Is resistant to adverse weather** conditions (-20°C to +60°C).
- **Saves money** by eliminating the need for odour-reducing additives for septic tank installations.
- **Requires no specialist installation** – can be installed by semi-skilled workers.
- **Requires no maintenance**, other than regular replacement of the carbon filter cartridge.
- **Provides greater freedom of design** for engineers, architects and design professionals.

## The Accessories

The **STUDOR® Maxi-Filtra** is supplied with one carbon filter and the connector as standard.

The **Maxi-Filtra** fits 80mm /100mm.

The replaceable carbon filter should be changed regularly.

The optional aluminium cover provides increased protection from animals / birds and the environment, i.e. inclement weather & UV light.

## The Installation

The **STUDOR® Maxi-Filtra** may be installed vertically or horizontally in an accessible external location. No specialist installation is required – the **Maxi-Filtra** is commonly installed with a push-fit connector. The cap simply lifts off to enable easy access for the carbon filter to be replaced a minimum of two-yearly. In installations with high odour saturation the carbon filter should be replaced more regularly when odour becomes noticeable.

## Application

**STUDOR®**'s innovative **Maxi-Filtra** is particularly suited for filtering bad odours resulting from the following applications:

- Septic tanks
- Existing open vents
- Outside installations
- Newly installed open vents required by local regulations

## Our Credentials

**STUDOR®** is the world-leader in plumbing drainage venting technology. With over thirty years of experience, our unrivalled knowledge and expertise continues to ensure that the **STUDOR®** products meet the most rigorous of requirements. Our products are used extensively internationally – including within many of the world's most famous buildings and construction projects already completed and those currently in progress.
